### Message from the Guest Editors

Dear Colleagues,

Local climate change, including but not limited to the Urban Heat Island effect, is driven by the increasing expansion of our cities and enhanced by global climate change. The ensuing outcome is one of the main environmental challenges of today with major impacts on energy and human health. As the outdoor ambient temperature is increased during the cooling season, total and peak cooling energy and electricity demands rise consequently. Additionally, urban overheating impacts human well-being and health, ranging from increased thermal stress to peaks in morbidity and mortality, specifically during heatwaves. Therefore, it is paramount that mitigation and adaptation strategies for urban heating and overheating are proposed and assessed in detail.

Deadline for manuscript  
submissions:

**closed (30 June 2019)**

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
