Message from the Guest Editors

Dear Colleagues,

Due to the impact of human activities and climate change, inland natural water bodies are facing the threat of eutrophication. These freshwater ecosystems are undergoing or have undergone a steady-state transition from macrophyte-dominant clear water state to algae-dominant turbid water state. Eutrophic water bodies receive not only a large amount of exogenous nutrients, such as nitrogen and phosphorus, but also exogenous organic matter. These internal and external organic matter converge and decompose in the water body, which may significantly promote the decomposition of refractory substances in the water body, release greenhouse gases, and even cause biofeedback on climate change. Therefore, this Special Issue mainly focuses on the source and composition of organic matter, including particulate organic matter and dissolved organic matter in eutrophic water bodies via various traceability technologies, the migration and transformation process of organic matter in water bodies, and the environmental effects caused by the decomposition of organic matter.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
