Message from the Guest Editors

The world is facing a situation without precedent: we will soon have more older people than children and more people at extreme old age than ever before. To accomplish this, society needs to invest in the prevention and treatment of chronic diseases, frailty and all the burdens associated with aging such as falls prevention and cognitive impairment. Papers addressing these topics are invited to this Special Issue, especially those combining a high academic standard coupled with a practical focus on providing input strategies to minimizing the burden of aging.

This Special Issue of the International Journal of Environmental Research and Public Health (IJERPH) focuses on the current state of knowledge on how society in general and health professionals in particular can contribute to minimizing the burden of aging disorders. New research papers, reviews, case reports and case series are welcome to this issue. Other manuscript types accepted include methodological papers, position papers and brief reports.

We will accept manuscripts from different disciplines including exposure assessment science, epidemiology, clinical studies, risk and health impact assessment and risk management.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
