Message from the Guest Editor

Childhood abuse and neglect (CAN) is a worldwide problem that affects children of all ages, ethnicities, and socioeconomic backgrounds. Research has found that survivors of CAN are at a high risk of developing psychological and interpersonal difficulties. However, despite evidence of the negative consequences of CAN, psychological adjustment after abuse varies widely, and a significant portion of survivors do not show significant impairment. Thus, more research is required to understand the complex relationships between CAN and mental health, as well as to analyze the variables that contribute to differences in survivor adjustment following abuse. Manuscripts must clearly focus on analyzing the association between child abuse and neglect and the mental health of the survivor during childhood, adolescence, or early adulthood, as well as on investigating the role of personal and environmental resilience factors. Special emphasis will also be given to the evaluation and implementation of interventions aimed to the improvement of survivor's mental health. Submissions should include original articles, brief reports, or critical reviews (systematic reviews or meta-analyses).

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
