Message from the Guest Editors

Families play an integral role in children's development, with great influence on aspects including healthy eating, physical activity, screen time, and sleep behaviors. Understanding the family context and strategies for the promotion of health behaviors have the potential to improve family health outcomes and have lasting impact. The complexities of working with families demand special attention. This Special Issue will highlight studies focusing on the development of children's health behaviors within the family context.

In particular, we are interested in research conducted in the many settings that can support families with health promotion efforts, including primary health care, early care and education settings, schools, faith-based organizations, and social service organizations, among others. We are also interested in work focusing on underserved groups, including racial/ethnic minorities, immigrants, indigenous populations, those living in rural or remote areas, and/or low- and middle-income countries. We will consider a variety of research papers, including reviews, observational studies, and intervention or implementation trials.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
