Message from the Guest Editors

The COVID-19 pandemic, which emerged at the end of 2019, is having a global effect on health, wellbeing and the economy. Older people are more at risk of COVID-19 infection and death. However, there is emerging evidence that children and young adults may be at great risk of its unintended consequences. These include months if not years of lost schooling and social interaction at key periods of development, the disappearance of training opportunities and routes to employment and an increase in abuse and neglect of children during lockdown. The transference of health services and resources in reaction to the pandemic is likely to cause disruption to routine surveillance of child health and immunisation schedules, as well as maternity services and practices, and child and adolescent mental health services. Furthermore, existing disadvantages may be exacerbated, with the consequence being a widening health and educational inequality. The experience of lockdown differs widely depending on individual circumstances.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
