Message from the Guest Editors

Complementary therapies can be defined as therapeutic practices used in addition to conventional treatments. Since the last years, physiotherapists have integrated these practices in their clinical setting. However, in some cases, further scientific evidence tends to be needed. Therefore, for the best evidence-based clinical practice, new complementary approaches need to be investigated. This Special Issue aims to give an overview of the most effective complementary therapies applied in the field of physiotherapy. It aims at providing rigorous peer-review papers that will help to advance the discipline. Potential topics include, but are not limited to:

- Acupuncture
- Dry needling;
- Mind–body therapies;
- Manual lymphatic drainage;
- Myofascial release therapy;
- Virtual reality;
- New technology;
- Pain/health education;
- Imagery.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
