Message from the Guest Editor

Dear Colleagues,

Environmental simulation models provide a solution exploration space for many of the key issues and problems we face in the custodianship of our planet. The turn of the decade is a good time to take stock of the state-of-the-art and the new or remaining challenges for the research agenda. This special issue on Advances in Environmental Modelling will include within its remit simulation modelling of physical, biological, economic and socio-cultural environments. The theme will incorporate not only advances in the approaches to environmental modelling per se, but a more broader view on the evolving contributions that these models make in decision-making and to the sustainability agenda.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
