Message from the Guest Editor

Dear Colleagues,

Population age is rapidly increasing around the world, and *geriatric syndromes* are clinical conditions common in *older adults*.

Geriatric syndromes including frailty, cognitive impairment, falls, functional decline, chronic pain, weight loss, anorexia, depression, and multi-morbidity increase in the risk for adverse outcomes, such as disability, hospitalization, and mortality. Therefore, geriatric syndrome prevention strategies must be important to realize a “society of health and longevity.” In addition, it would be useful to implement these strategies in a community setting.

This Special Issue seeks papers on geriatric syndrome prevention in the community setting, including papers on the impacts of health outcomes and environmental conditions related to public health. Epidemiological and mechanistic studies will be considered. Systematic reviews will be also considered.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
