Message from the Guest Editor

Gestational diabetes mellitus (GDM), the mild to severe glucose intolerance of pregnancy, reflects the underlying diabetes mellitus (DM) in any population. DM is a modern-day plague which kills one human every six seconds; it is an epidemic devouring 12% of the world's health expenditure and increasing exponentially. Thus, DM is ringing alarm bells for prevention worldwide. GDM—a harbinger of impending future DM—can help to contain this impending disaster if identified, and preventive measures like lifestyle modification are applied effectively after delivery.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
