Message from the Guest Editors

A growing body of evidence points to the complexity of geographic contexts in shaping health outcomes, and their implications for interventions. Despite awareness of this complexity, it is challenging for spatial investigations to fully account for its presence. To address such challenges, a new frontier of health geography is emerging; one that is focusing on new forms of geospatial technologies, novel methods and analytical approaches including customized software development, and means to capture physical and social context. In this Special Issue we invite researchers who use spatial data to showcase their new methods and applications for any health problem, in any health setting. The only limitations are that the project must highlight approaches that advance understanding of geographic context in health and its implications for intervention.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
