Message from the Guest Editor

According to the World Health Organization (WHO, 2015), non-communicable disease, also known as chronic disease, accounts for 70% of all premature deaths, globally, each year. It is widely recognized that these are complex conditions influenced by an interplay of personal, behavioural, social, economic, and environmental factors. Researchers, policy makers, and health practitioners are interested in identifying effective prevention and management strategies to prevent the onset of chronic disease as well as reduce premature deaths from chronic disease. Identifying predisposing factors is necessary to developing effective interventions. Moreover, research on the efficacy and effectiveness of community based interventions that address multiple levels of influence is needed. This research focuses on policy, organizational systems, environment, behavior, and/or preventive medicine interventions.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
