Message from the Guest Editors

Homelessness has increased in recent years in many industrialized countries. People experiencing homelessness are sicker than their housed counterparts. They are more likely to die prematurely—with a life expectancy no more than 50 years—have higher prevalence of sexually transmitted infections, heart attacks, chronic disease, invasive cancers, and mental health problems. The lack of secure and stable shelter, food, income, hygiene, and barriers in accessing health care make it nearly impossible to be healthy. Living conditions on the streets or in shelters (unstable housing, food insecurity, access to drinking water, irregular meal times, etc.) makes it more difficult to stick to complex medicine regimens and for medical follow-up. In addition, the homeless encounter many barriers to accessing health services, such as cost, language, transportation, and discrimination. The evolution in homelessness in various countries makes it important to study the specific characteristics of some subgroups of homeless.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
