Message from the Guest Editors

Dear Colleagues,

Research has contributed a lot to our knowledge of the determinants of success of persuasive messages in health communication. However, communication professionals still face great challenges when trying to develop messages that effectively change the behavior of large groups of people. This is evident, for example, from present-day problems in persuading people to adhere to the guidelines for containing the COVID-19 pandemic.

This Special Issue will report studies into the effects of theory-based health communication interventions in groups with a low level of health literacy, preferably compared with the effects of the same interventions in other groups. We also welcome, for instance, studies on the co-creation of new interventions or qualitative studies to understand perspectives of vulnerable groups to inform communication interventions.

We expect authors not only to discuss the significance of their findings for the practice of health communication, but also to pay close attention to the contribution of their research to the theoretical framework they have chosen as a starting point, and to the upliftment of the groups/communities they have studied.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
