Message from the Guest Editors

Globally, media have been used by various age groups to fulfill different needs such as stress relief, seeking and/giving information and social support, entertainment, and learning. The increasing exposure and usage of media have direct and indirect impacts on mental and physical health at individual, group, and community levels. The affordances of media provide different methods of communication: one to many (e.g., TV), one to one (e.g., instant messaging), and many to many (e.g. social media). These various forms of communication allow media to influence societies at different scales. Individuals' time spent on media can replace their time for face-to-face interaction with others and their time for physical activities. The contents of media can influence individuals' knowledge, attitudes, and behavior, related to health. Health information on both traditional and social media can shape social discussions on health topics and inform policy-making. The effective use of media for health campaigns can make positive changes in the community health. This Special Issue seeks to examine the increasingly important role that media play in community health.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
