Message from the Guest Editor

Dear Colleagues,

Clinically severe obesity can have serious health consequences for patients. Bariatric surgery has been established as the most effective treatment for morbidly obese patients, with a substantial reduction in mortality, risk of developing comorbidities, and costs.

Over the last ten years, clinical research on bariatric surgery has grown exponentially, mostly focusing on weight loss and reduction in comorbidities, but leaving gaps in the nutritional and health status of the subject after surgery in the long term.

This Special Issue of *the International Journal of Environmental Research and Public Health (IJERPH)* focuses on the current state of knowledge on The Nutritional Management of Pre- and Post-Surgery Obesity Patients. New research papers and reviews are welcome to this Issue.

Best regards,

Dr. Mauro Lombardo

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
