Message from the Guest Editor

Despite improvements in health status in many populations, inequities by race/ethnicity, gender identity, sexual orientation, socioeconomic status, and other factors remain. Structural and social determinants of health directly and indirectly influence health inequities. For this Special Issue, we invite submissions that advance methodology and statistical analytical techniques in elucidating causal mechanisms underlying health inequities, research that examines community-based interventions to reduce health inequities, and academic-community partnerships to address health inequities. Research that acknowledges the complex, dynamic nature of multilevel influences on health inequities is encouraged. We are also particularly interested in studies that test interventions that target policy, systems, and environmental change. Research may be either theoretical or empirical and can include systematic reviews.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
