Message from the Guest Editor

We would like to see papers working on soil pollution imperatives revisited in a new context, or environmental exposure and human health imperatives revisited from the new disciplinary perspective(s). With such a premise, recommended topics may include but are not limited to the following:

- Soil pollution policy and management;
- New technology and method for measuring soil ingestion;
- Case studies on environmental exposure to soil pollution and health risk assessment;
- Health effects resulted from soil pollution, especially for children;
- Knowledge management and educations for reducing environmental exposure to soil pollution;
- Characteristics of urban soil pollution and its health risks;
- Environmental epidemiology related to soil pollution.
Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: — free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE and SSCI (Web of Science), PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Public, Environmental & Occupational Health) / CiteScore - Q1 (Public Health, Environmental and Occupational Health)
