Message from the Guest Editor

Each year, 800,000 people die by suicide across the world. Suicide is a leading cause of preventable death and for every fatal outcome, approximately 20 people attempt to take their own life. Understanding the vulnerability factors and acute states that trigger suicide and related behaviours is vital in improving suicide prevention efforts and initiatives.

For this Special Issue, we are particularly interested in receiving high-quality papers that seek to advance theoretical accounts and explanations of suicide, investigate the mechanisms and responsible pathways that take an individual closer towards or further away from suicidal ideation and behaviour, conduct ecologically valid, real-time measurement of suicide outcomes and associated mechanisms (e.g., micro-longitudinal or experience sample methodologies), as well as treatment development and evaluation studies (case series, feasibility studies, randomized controlled trials). Furthermore, we would also welcome reports from qualitative enquiries into the lived experiences of suicide outcomes, from the perspectives of the individual or their families and carers.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
