### Message from the Guest Editor

The age at which many children start intensive training has significantly decreased in recent decades, with the majority of youth athletes pre- or early pubertal. Despite this, the optimal approach to training in youth is unclear. There has been considerable renewed interest in understanding the influence of exercise training on the physiological responses of youth, and how this is moderated by factors such as sex, maturity and training type. This understanding has important implications for talent development and identification strategies. However, fundamental questions remain, with methodologically rigorous approaches required to fully elucidate these sought-after answers.

This Special Issue calls for original research articles addressing the influence of training on the physiological responses of youth, including those that consider the practical application to sporting contexts. Studies considering the full spectrum of responses, from aerobic to strength, speed and fundamental movement skills are invited. Reviews, intervention-based and mixed methodology studies are also welcome.

## Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Public Health, Environmental and Occupational Health)
