Message from the Guest Editors

The future of work is being shaped by rapid changes in the workplace, work, and workforce. Driven by advances in industry, this movement is marked by the accelerated pace of developments connecting people, places, and things. All these advances and developments have implications for worker safety, health, and well-being and require innovative and responsive occupational safety and health strategies. One such strategy is the *Total Worker Health*[®] framework, which recognizes work as a social determinant of health and prioritizes the principles of healthy work design to protect and advance worker safety, health, and well-being. Such efforts improve both our understanding of and capacity to address factors that present possible risks to today's and tomorrow's workforce, leading to empowered workers who thrive and contribute productively at work, at home, and across the U.S.A.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Public Health, Environmental and Occupational Health)
