Message from the Guest Editors

We are organizing a Special Issue on the epidemiology and prevention of workplace health in the health care setting in the *International Journal of Environmental Research and Public Health*.

Workplace health promotion (WHP) has become a significant issue worldwide. Our main interest is on presenting a wide experience of epidemiological studies, as well as best practices concerning violence, injury, and stress in the health care sector.

Violence against Hospital health care worker (HCW) is an important issue during interactions with patients, their relatives or companions, and many authors recognize the phenomenon of violence at work is a specific risk factor predicting stress and possible stress-related pathologies in the health care sector.

On the other side, injuries among HCWs are a common occurrence, and there is a large space for improving the consequences of biological, chemical, and physical risk factors.

The Special Issue is open to contributions that focus on the aforementioned topics, as well as those that can present examples of stress management activities for HCWs, including (but not limited to) yoga, mindfulness, and tai-chi.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
