

Special Issue

HIV and Global Health Practice: Reciprocal Innovations, Partnerships and Sustainability

Message from the Guest Editors

Despite significant progress, effective prevention, and treatment strategies, HIV is likely to remain a significant global health challenge in the foreseeable future. It is crucial that the HIV global health practice transforms into a truly collaborative and multidisciplinary field, placing value on reciprocal innovations, equitable and mutually beneficial partnerships across healthcare systems, public health professionals, researchers, policymakers, and community organizations, as well as values such as social justice and global health equity. This Special Issue aims to build on lessons learned during the COVID-19 pandemic and beyond to advance the HIV global health practice and prepare the field for future societal disruptions due to health, climate change, or conflicts. We welcome manuscripts addressing any aspect of HIV and global health practice, including prevention, treatment, and management of HIV, health system strengthening, global health policy and advocacy, community health, and related health issues on a global scale, particularly those focusing on reciprocal innovations, partnerships, and sustainability.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
