

## Special Issue

# Psychosocial Care and Wellbeing for Oncology Patients

### Message from the Guest Editors

Receiving a diagnosis of cancer can be difficult and overwhelming for patients. Depression and anxiety are often heightened among those with cancer, with meta-analytic data indicating that mood disorders are present in up to 38% of these individuals. A number of complex factors influence the psychosocial outcomes of people with cancer, including individual characteristics, disease and treatment characteristics (including side effects of treatment), social support, and quality of care provided (e.g., information provision and involvement in decision making). Despite significant investment in the psychosocial wellbeing of patients with cancer, the literature continues to identify gaps and needs in this area. This Special Issue welcomes the contribution of research seeking to identify and/or address the gaps in psychosocial care and wellbeing for people with cancer.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
