Health Care and Community Engagement in the Outdoor Context

Message from the Guest Editor

The importance of nature and the natural environment, as a determinant of human health and wellbeing, has been a matter of scholarly and practical interest, with novel programs emerging across the globe.

Understandings of program design, community engagement, and issues of practice and implementation are increasingly sought in order to extend knowledge of “what works”. Topics of interest are intentionally wide-ranging and may include: Interaction with animals, plants, and/or landscapes for health; Outdoor experiences and health; Outdoor interventions; Ecotherapy; Parks and green prescribing approaches; Forest bathing; Green care farms; Community gardens; Ecological grief; Land-based health care and education; Indigenous approaches; Issues of access, diversity and equity; Disability and social vulnerability; Implementation studies (studies of what works); Individual, community and policy level interventions and outcomes; Antiracism and antidiscrimination program strategies; Relationship and connection with nature; Nature/built environment interactions; Reciprocal healing of humans and nature.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
