

Special Issue

Health Promotion and Mental Health Among People with Breast Cancer

Message from the Guest Editor

We invite submissions for an upcoming Special Issue focused on health promotion and mental health among women with breast cancer. This Special Issue seeks to highlight innovative research, interventions, and strategies that promote mental health and well-being for women diagnosed with breast cancer. We are particularly interested in studies that explore the intersection of health promotion and mental health, including, but not limited to, the following: psychosocial interventions, coping strategies, support systems, the role of healthcare professionals in mental health care, and community-based programs. We welcome qualitative, quantitative, and mixed-methods research that addresses the mental health challenges faced by women in diverse cultural, socioeconomic, and geographical contexts. This Special Issue aims to provide a comprehensive understanding of how mental health can be supported throughout the cancer journey, from diagnosis to survivorship. We encourage submissions that offer evidence-based solutions, highlight gaps in current care models, and propose new frameworks for integrating mental health support into breast cancer treatment and recovery.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
