

## Special Issue

# Child Welfare and Health Care

### Message from the Guest Editor

Over the last 30 years, we have witnessed the emergence of important negative health outcomes in all age groups, especially children. Excess body weight, neurodevelopmental disorders, low school performance, and allergies, among other health-related problems, are commonly reported in several countries. The causes of these outcomes include nutritional transition, globalization, physical inactivity, inappropriate medication use, insufficient attention to the gestational transition, inadequate education, and socioeconomic factors, among other factors. Fortunately, science has contributed to a better understanding on how to prevent these negative outcomes. This Special Issue invites researchers to publish the results of studies that have investigated child welfare and health care, and thus contribute to a continuous improvement in the quality of life of the mother and her child.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
