Cancer Health Disparities in Prevention and Care

Message from the Guest Editor

Cancer continues to impose an unequal burden on many communities that experience barriers to prevention, diagnosis, and quality care. This SI invites submissions that deepen our understanding of the unequal distribution of cancer risk, prevention, and care, as well as strategies that effectively address these differences. We welcome original research, reviews, and community-engaged studies that explore biological, behavioral, social, cultural, environmental, and system-level factors influencing cancer risk and outcomes among populations with limited access to prevention and treatment resources. Manuscripts may focus on innovations in cancer prevention and screening, culturally responsive interventions, improvements in access to timely diagnosis and quality care, survivorship experiences, and policies that promote equal health outcomes. We particularly encourage work that bridges research and practice, highlights locally driven solutions, and reflects partnerships between scientists, clinicians, and communities. We aim to highlight evidence-based research that advances cancer health and reduces disparities in prevention and care worldwide.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
