

Special Issue

Promoting Mental Health and Wellbeing in Children and Young People at Risk

Message from the Guest Editors

There is an increased number of children and adolescents living with mental health problems. For children and young people living in vulnerable life situations or at risk of developing mental health problems, a variety of risk factors might be significant contributors. These factors relate to both structures and relations within the family environment, growing-up conditions, institutional factors concerning daycare or schooling, child and adolescent services within the community, or personal factors within each individual. To encounter these potential complex needs, early interventions and collaborations across disciplines and professions stand out as important contributions. This Special Issue on mental health in children and young people focuses on the current state of knowledge on children and young people living in vulnerable life situations or at risk of poor mental health, on practical implications for health-promoting actions, and on interdisciplinary collaborations between services to promote children's and adolescents' mental health and wellbeing.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
