

Joint Special Issue

Research on Emotional and Cognitive Development in Children

Message from the Guest Editor

During the course of life, cognitive and emotional development go hand in hand. A delay or impairment in one can affect the development of the other. Understanding how cognitive and emotional development influence each other during development is crucial in order to plan effective interventions that take into account a child's difficulties in a comprehensive manner. Treating a cognitive difficulty without taking into account the emotional component and vice versa may result in a failure to achieve the therapeutic objective and affect the individual's quality of life.

This Research Topic welcomes many different types of papers which regarding emotional and cognitive development in children, such as original research articles, case reports, and systematic reviews, reviews papers.
