

Special Issue

Clinical Medicine of Gynecological Diseases

Message from the Guest Editor

Gynecological diseases can have a significant influence on patients' quality of life. Epidemiological studies have shown that the prevalence of gynecological disease differs in particular age ranges. Moreover, there is still a need to introduce proper prophylaxis, diagnostics, and therapy of gynecological diseases in female patients as early as possible to prevent serious conditions. This Special Issue invites authors to contribute original research and review articles that will encourage progress in the efforts to understand the pathophysiological mechanisms, leading to the development of different benign and malignant gynecological diseases in women, the impact of these symptoms on the quality of life, and the therapeutic options available for patients.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul R. Ward
