

Special Issue

Research in Pharmacological Treatment for Chronic Diseases

Message from the Guest Editor

Chronic disease is a persistent or long-term health condition or disease, representing one of the main causes of human death and disability. Although there are various interventions aimed at promoting the health of people with chronic diseases, pharmacological treatment is still the cornerstone and an important part of chronic disease research. With the strengthening of people's understanding of chronic diseases and progress within clinical pharmacological research, pharmacological treatment technology for chronic diseases is constantly developing. This Special Issue aims to collate up-to-date research on pharmacological treatment for chronic diseases, from the acute phase to the maintenance and rehabilitation phases. We welcome reviews and original research papers from basic and clinical research, covering all branches of chronic disease pharmacotherapy.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
