

Special Issue

Health Economics of Population Aging

Message from the Guest Editor

Population aging introduces many issues that merit health economists' attention. Compared with younger adults, the elderly face declines in somatic function and cognitive ability, are more vulnerable to diseases and need more long-term healthcare. The ongoing COVID-19 pandemic brings about new challenges to the elderly. Issues such as reduced access to healthcare, limited food supplies, and separation from their children/grandchildren due to safety concerns and lockdown policies are likely to impact the elderly more seriously than their younger counterparts. Thus, an adequate understanding of the health challenges faced by the elderly, the determinants and consequences of their health-related behaviors, as well as the roles families, private organizations, and public sectors may play, is necessary for informing public policy and private sectors on the most efficient, cost-effective, and equitable course of action. Research articles and reviews examining these issues are invited for this Special Issue. Those combining rigorous analysis and clear policy implications are especially welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
