HIV Care Engagement and Quality of Life Among People Living with HIV

Message from the Guest Editor

Over the past four decades, advances in biomedical treatment of HIV have shifted HIV from a terminal diagnosis to a livable and treatable chronic illness, allowing people living with HIV to live fuller, healthier lives. In spite of these achievements, there are racial, ethnic, gender, and geographic disparities in healthcare access, HIV care engagement, medication adherence, viral suppression, and quality of life. Biobehavioral, community, and structural interventions and strategies are needed to achieve equity in HIV care outcomes and quality of life, particularly among the most marginalized members of society. Racism, sexism, economic oppression, transphobia, homophobia and heterosexism, HIV stigma, and their intersections continue to influence the health outcomes and the overall well-being and lived experiences of people living with HIV. This Special Issue welcomes qualitative, quantitative, and mixed-methods research and literature reviews focused on HIV care engagement and quality of life among people living with HIV, as well as the influencing socio-structural factors. Papers focused on marginalized populations from a range of regional contexts globally are welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
