Primary Care: Nursing's Contributions to Improving Access and Quality of Care

Message from the Guest Editor

Health systems in which Primary Care plays a coordinating role tend to achieve better population health outcomes. Nursing has contributed significantly to both the management of health systems and services, as well as to direct patient care. However, considerable challenges remain in ensuring equitable access to services that are essential for comprehensive and continuous care. Furthermore, advancements in nursing practice are necessary to enhance supported self-care, as well as to foster user and community participation and engagement aimed at improving well-being and quality of life.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou

RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
