

Special Issue

Creating the Future We Expect: Enhancing Women's Health, Well-Being, and Gender Equality

Message from the Guest Editors

Racial and ethnic disparities in women's health and well-being have persisted over time. This includes the factors that create and perpetuate disparities in physical, mental, social and economic well-being for women.

Factors that contribute to these persistent disparities that have been the focus of existing research include material health inequities, clinical and non-clinical interventions, persistent impact of racism and sexism in access to adequate care and the limitation of social and health care policies to address persistent disparities.

This special issues seeks papers both empirical and theoretical that advance our understanding of how to address, reduce and ultimately eliminate these disparities in all aspects of health and well-being for women. This includes address gender equality across all aspects of life and life stages. We welcome both research, policy and papers that highlight innovative approaches to create meaningful and lasting change in the health and well-being of women across all stages in their lives and throughout all communities both locally and globally.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
