

Special Issue

Sustainable Work Environment and Occupational Well-Being

Message from the Guest Editors

The global ecological footprint has been growing significantly since the mid-20th century. In response to this exponential increase, in 2015, the United Nations presented a set of 17 Sustainable Development Goals (SDGs). Of these, particularly important for this Special Issue are those related to environmental and occupational health and the well-being of individuals. Initiatives are being taken across various continents to control climate change and consequently improve people's quality of life and the planet's future. To this end, the circular economy, the responsible use of resources, decent work and well-being are at the core of all sustainability policies. In this framework, this Special Issue aims to bring together the research being conducted in the framework of the UN SDGs, namely Sustainable Work Environment and Occupational Well-Being.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
