

Special Issue

2nd Edition: Impacts of Indoor Environments upon Public Health and Wellbeing

Message from the Guest Editor

The significance of 'healthy' indoor environments has come to the fore.

The evaluation of relevant interventions, through quantitative or mixed methods;

The prevalence of exposure to risk factors (e.g., physical hazards and social determinants), through monitoring or modelling studies;

Dose-response relationships and/or potential for synergistic effects across parameters of environment quality upon health and wellbeing outcomes;

Evaluation of health inequalities arising from relevant parameters such as temperature, air quality, lighting, soundscapes, indoor space provision and access to green space;

Impact of 'smart' technologies and/or artificial intelligence applied to buildings for enhanced health and wellbeing (including aspects related to the digital exclusion);

Standards, best practices and policy approaches to improve population health via changes to indoor environments and their immediate surroundings.

Papers addressing the topics above are invited for this Special Issue.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
