Workplace Health and Wellbeing Research and Evaluation

Message from the Guest Editor

Workplace health and wellbeing is a fundamental aspect of health equity and social inequalities. Work-related health inequities are common in working populations and represent an increasing concern for individual workers, organisations, compensation authorities, and governments. We particularly welcome research working from critical paradigms and equity-focused approaches which pertain to social determinants of health and critical social theories. We invite new, original research papers, reviews, case reports, and conference papers to be submitted to this issue. Manuscripts that consider new approaches to interventions to prevent, treat, or improve outcomes pertaining to work and health are welcome, along with manuscripts that examine the impact of occupational factors, including risk and protective factors of wellbeing, and those that deal with workplace health protection and promotion, injury/illness prevention, and workplace screening practices and interventions. Experimental, cross-sectional, and longitudinal explorative studies of mental health and wellbeing within occupational settings are also welcome.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
