Healthy and Resilient Cities: Urban Spatial Planning, Design and Governance

Message from the Guest Editors

To develop healthy and resilient cities, it requires integrated thinking and approaches from a broad range of disciplines, e.g., urban planning and design, geography, public-health administration, environmental and ecological studies, economics and sociology.

Concerning, in particular, the significant impacts of COVID-19 over the past few years, the former model of urban development and governance is in great need of revisiting, through a multi-sectoral strategy. Therefore, these studies focusing on new epistemology and concepts (e.g., healthy cities, resilient cities, age-friendly cities, child-friendly cities, smart cities, green cities, low-carbon cities, etc.), and the empirical research in the fields of environmental behavior, social equality and sustainability (within, in particular, the urban context), as well as the studies providing novel methods and technologies in spatial planning, urban design, assessment of ecological vulnerability and resilience, that could be helpful to promote urban security and wellbeing, are especially welcome to this Special Issue.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
