

Special Issue

Research in Ecological Economy and Regional Sustainable Development

Message from the Guest Editors

Regional sustainable development is hindered by the contradiction between resources, environment, and social-economic development. How to realize the healthy development of economy, industrialization, and urbanization under the situation of tighter resource constraints and environmental deterioration is a practical problem that needs to be discussed and solved. Ecological economy is a modern economic system that can realize the coordinated development of economy, society, resources, and environment under the guidance of sustainable development. Developing ecological economy is an important means to promote regional sustainable development. Ecological economy discusses the contradictions between economic systems and ecological systems, reveals the inner relation and development rule of the system composed of economy, ecology, society, and nature, and probes into the harmonious development path of each subsystem. Thus, this Special Issue in the International Journal of Environmental Research and Public Health (IJERPH) focuses on Ecological Economy and Regional Sustainable Development and we hope relevant scholars can carry out research.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
