

Special Issue

Prevention and Intervention of Domestic Violence

Message from the Guest Editors

Programs that target the primary prevention, secondary or tertiary intervention or recovery from gendered violence are essential to reduce and eliminate violence against women and children across all age groups and among groups of diverse cultural, ethnic, disability, sexual and Indigenous backgrounds. This Special Issue will focus on evidence-based prevention and intervention programs that address gendered violence in order to promote our understanding of which programs are effective, and among which populations, and the lessons for future researchers and practitioners who intend to reduce violence against women and children. We invite you to submit your research that addresses gendered violence through prevention and intervention programs for any age group or people from diverse cultural, ethnic, sexual and ability backgrounds. The manuscript could belong to any of the following categories: reviews, study protocol and research studies.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
