

## Special Issue

# Multimorbidity in Primary Care: Prevalence, Management, and Health System Challenges

### Message from the Guest Editor

This Special Issue focuses on the growing number of people living with chronic diseases and multimorbidity. We invite original research on how these conditions appear in different populations, how they develop, how they influence and are influenced by work activity and employment status, and how healthcare services can respond more effectively and fairly. We welcome studies that link clinical and health data with real-world care, health policy development, and patient outcomes.

Submissions that take a holistic approach—including biological, psychological, and social aspects of health—are encouraged. We are especially interested in work that explores how different factors, such as social conditions, healthcare access, and treatment plans, interact and affect clinical outcomes.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
