

Special Issue

Oral Health in Children and Adolescents

Message from the Guest Editor

Dental caries is a main chronic disease that affects most of the pediatric population, therefore posing a very serious global health problem. When untreated, it might cause swelling, pain, and finally systemic symptoms and signs. On the other hand, manifestations of general diseases and other oral disorders may contribute to numerous problems and difficulties in young persons. Needless to say that such changes affect the child's quality of life. Thus, children and adolescents should be covered by systematic preventive and curative dental care, including also proper diagnostic tools and treatment. This Special Issue is open to any subject related to oral health in children and adolescents.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
