

Special Issue

2nd Edition: The Impact of ENT Diseases in Social Life

Message from the Guest Editors

Given the success of the past year, I am happy to announce the release of a second edition of the Special Issue "The Impact of ENT Diseases in Social Life". In this edition, we want to underline how the otorhinolaryngology sector has a significant impact on social life. About 10% of cancers that affect the population annually involve the head and neck region, and each year the guidelines evolve and change. The emergencies of the otolaryngology sector are among the most common, with numerous increases in hospitalizations in the ENT departments (bleeding, abscesses, dyspnea, etc.). The chosen interventions can significantly improve the patient's quality of life, and can help to avoid future complications. Given the importance of this medical and surgical branch, I invite you to submit your contributions to this Special Issue (articles, reviews, or case reports), with otorhinolaryngology as the main topic. Special thanks go to Professor Gay-Escoda, who will help us in the coordination for this Issue as .

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
