

Special Issue

Second Edition of Gynecological Cancer

Message from the Guest Editor

Last year, I had the great honor of receiving an invitation from the Editors of the *International Journal of Environmental Research and Public Health* to become the for the **Special Issue “Gynecological Cancer”**, in which 18 articles have finally been published. I appreciate your valuable contribution. Due to advances in modern technology, the use of next-generation whole genomic sequences and precise medicine has become much plausible in the treatment of patients with various kinds of gynecological cancers. Additionally, much evidence supports the significant therapeutic effects of targeted therapy and/or immunotherapy in the management of women with gynecological cancers, especially for those patients who are believed to have died of such diseases before. This 2nd edition of the Special Issue welcomes articles on these and other themes focusing on the treatment of various kinds of gynecological cancers.

Guest Editor

Prof. Dr. Peng-Hui Wang

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
