

## Special Issue

# 2nd Edition: Physical Rehabilitation and Sports Medicine of Human Movement

### Message from the Guest Editors

Health promotion is an active motivated behavior and the main concept in the aspect of preventive medicine. Among the scope of health promotion, movement is a very important element. It is well known that a better, healthy life can be achieved through active movement or regular exercise. However, different populations, e.g., the elderly, children, pregnant or menopause women, obese individuals, those suffering from a chronic disease, etc., must carry out different types of exercise with a different level of intensity to achieve a better result and reduce their risk of injury. In addition, identifying ways to support these groups and to prevent exercise-caused injury is a key issue if we want to turn regular exercise into a habit among these populations. This Special Issue seeks papers with up-to-date research on physical rehabilitation and sports medicine of human movement.

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPlus / SciFinder, and other databases.

#### Journal Rank:

CiteScore - Q1 (Public Health, Environmental and Occupational Health)
