Special Issue

2nd Edition: Physical Rehabilitation and Sports Medicine of Human Movement

Message from the Guest Editors

Health promotion is an active motivated behavior and the main concept in the aspect of preventive medicine. Among the scope of health promotion, movement is a very important element. It is well known that a better, healthy life can be achieved through active movement or regular exercise. However, different populations, e.g., the elderly, children, pregnant or menopause women, obese individuals, those suffering from a chronic disease, etc... must carry out different types of exercise with a different level of intensity to achieve a better result and reduce their risk of injury. In addition. identifying ways to support these groups and to prevent exercise-caused injury is a key issue if we want to turn regular exercise into a habit among these populations. This Special Issue seeks papers with up-to-date research on physical rehabilitation and sports medicine of human movement.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief
