

## Special Issue

# Public Health Strategies for HIV/AIDS Prevention and Treatment

### Message from the Guest Editor

The purpose of this Special Issue is to highlight innovative, equitable, and sustainable public health strategies for HIV/AIDS prevention and treatment in diverse settings. We welcome manuscripts focusing on any area of public health strategies and their implementation, including those focusing on the prevention of new infections, early detection and diagnosis, treatment and care for people living with HIV, the prevention of mother-to-child transmission, surveillance, and monitoring, and other strategies, including community, stakeholder, and key population engagement, community outreach, public health promotion, and advocacy. Additionally, we encourage manuscripts focusing on health equity and social determinants of health. HIV service provision is increasingly delivered via mHealth solutions and directly in community settings, often engaging communities and those with lived experience. These and other strategies work synergistically to improve population health and reduce the burden of HIV/AIDS. This Special Issue will highlight public health strategies implemented in various settings and aid in working toward the accomplishment of the SDGs

## About the Journal

### Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

*IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.
