Health Equity and Health Disparities in Public Health Research and Practice

Message from the Guest Editors

Healthy People 2030 defines health equity as “the attainment of the highest level of health for all people.” It also defines a health disparity as “a particular type of health difference that is closely linked with social, economic, and/or environmental disadvantage.” Health equity and health disparities are a national and international public health and health education priority. Racial and ethnic minorities, people in rural communities, individuals and families with disabilities, and other underserved or underrepresented groups face longstanding disparities in health. This Special Issue of the *International Journal of Environmental Research and Public Health (IJERPH)* focuses on health equity and health disparities in public health research and practice. We will accept studies from different disciplines that address health disparities and inequities. The following are a few suggested examples of areas of interest that could be addressed in this Special Issue (this is not an exhaustive list): screening, epidemiology, genomics, intervention studies, services research, health policy, disabilities, health education, and health behavior.

About the Journal

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Scientific discoveries and advances in this research field play a critical role in providing a rational basis for informed decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards.

IJERPH provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality peer-reviewed journal.

Editor-in-Chief

Prof. Dr. Paul B. Tchounwou
RCMI Center for Urban Health Disparities Research and Innovation,
Richard N. Dixon Research Center, Morgan State University, Baltimore,
